Cantilever Systems

Structural Design, Superior Performance

APC Cantilever Racking is the best solution to store those long, irregular and awkward loads. As each system is individually designed, APC's Technical Consultants will evaluate your requirements and recommend the system that best suits your needs.

Applications

- Perfect solution to store long, irregular and awkward loads
- Consists of a series of single or double sided columns with cantilever arms securely supporting the product
- Constructed from structural steel components; lighter duty options are available
- Infinitely adjustable arms with a variety of sizing options
- Designed to suit your requirements

Features

This unique cantilever system offers many advantages. The arm location can be easily and efficiently adjusted to suit your specific requirements. So no matter how large, small, long or short your storage problems are, **APC's Cantilever Racking** system will provide you with the safest and most optimised solution.

Finish

All structural steel components are surface prepared by blast cleaning to class 2½ in accordance with AS 1627.4 and then coated with an inorganic zinc silicate. Standard colours are blue column/base and safety yellow arms. Hot-dip galvanising available for special applications.

Standard Sizes

Arm Lengths (mm)	450, 600, 750, 900, 1000, 1100, 1200 & 1500
Column Heights (mm)	2400, 3000, 3600, 4200, 4500, 4800, 5400 & 6000
